Technical Skills:

- Programming Languages: C++, C#, HLSL, HTML
- Libraries: Direct3D 11 (DirectX 11), ImGui, STL, MonoGame
- Game Engines: Unreal Engine 5
- Other Tools: GitHub, RenderDoc, Visual Studio, Notion & Obsidian

Projects:

Team Lead - Introduction to Collaborative Enterprise (Foundation Year)

- Coordinated a team of 12 building a game to a fixed module deadline, acting as the communication link between members.
- Tracked who was working on what and followed up where work was slipping, keeping the group moving toward delivery.

Real-Time Renderer (C++, HLSL, Direct3D 11, ImGui)

- Built a Direct3D 11 renderer in C++ with per-pixel lighting (ambient, diffuse and specular) written in HLSL, on textured surfaces.
- Replaced hand-written per-object draw code with a scene system: randomly placed objects held in a std::vector, so the number of objects is one value.
- Handled window resizing by rebuilding the swap chain buffers, render target and depth buffer, and updating the viewport and projection. Tracked down a squashed image (integer division in the aspect ratio) and a memory spike while dragging the window.
- Added an ImGui panel that shows the renderer’s values live, for debugging.

Split. Boom! - Multiplayer Game (C#, MonoGame)

- Built a server and client in C# over TCP. The server keeps accepting new players and gives each connected player their own thread and ID.
- Kept the shared list of connected players in a thread-safe dictionary (ConcurrentDictionary), so the threads can’t corrupt it.

Education:

BSc (Hons) Computer Games Programming with Foundation Year, University of Staffordshire, 2024 - Expected 2029.

Relevant modules: Real-Time Rendering Framework, Multiplayer Games Programming.

Experience:

Labourer, Harris Homes, June 2026 - October 2026

- Worked with the team to meet fixed deadlines.
- Used power tools under strict health and safety requirements.

Office Assistant, Harris Homes, June 2025 - October 2025

- Acted as first point of contact for client calls and emails, resolving queries directly and escalating where needed.
- Managed the director's diary, booking meetings around site visits and rescheduling at short notice.
- Took meeting notes and wrote them up into structured records in Notion, used by the team for tracking projects and scheduling jobs.

Extracurricular Activities:

Art Club: Member of a painting club, working on independent pieces across different media.

Interests:

Researching history, mathematics, science and machine learning; art, design and how things are invented; innovative games.
